

MUŞ REGION IS BEING DEVELOPED

As the construction of Alpaslan II Dam and HPP located on the Murat River in Muş is in progress, it will provide an annual electricity generation in the capacity of 862 million 270 thousand kWh with its installed capacity of 265 MW. The energy that will be produced will be enough to meet the energy need of an entire city of 375 thousand.

LARGEST DAM AREA IN PRIVATE SECTOR

5 villages will be supported with resettlement projects.

The dam area is planned to affect 22 villages in total. For the villages Tepe, Bağıçi, Kayalidere and Göçmenler hamlet the resettlement project has been developed to reconstruct the entire physically displaced area, while for Sanlıca village the same is planned in partial. Energo-Pro assumes a huge role by realizing a resettlement, although there are no legal obligations for the same. This proves Energo-Pro to be a leading company in sustainability and international standards setting for humanitarian and social management.

ENERGO-PRO ALPASLAN II DAM and HPP

GRIEVANCE MECHANISM

Stakeholders can reach our social team at any time through platforms where they can obtain information and resolve complaints using written and verbal communication mechanisms.

The Social Management Mechanism is actively implemented in order to eliminate the any adverse effect on people by the dam and its construction.

Energopro is in contact with all stakeholders.

Within the scope of sustainable project principles, Energopro is in consistent and perpetual communication and interaction with all project stakeholders and public institutions.

Social Team on Duty

The Social Team on site accepts and seeks for solution of all kind of grievances and requests of affected people from all groups: villagers, farmers, women, children. They are just a phonecall away.
